ATTENTION: To maximize your satisfaction with your Struttin' Stake, we highly recommend that you test fit your decoy and familiarize yourself with the proper operation before going into the field. Setting decoys in the wee hours (darkness) presents enough challenges. We want your hunt to be a success.

1. Each turkey decoy has a unique attachment connection. The Struttin' Stake accommodates most, and can be customized to fit by using or eliminating the Removeable Decoy Rest. To remove it, simply twist counter-clockwise up through the threads. If the Rest is tight, wrap the Rest in a cloth to protect it, and twist off using pliers.

2. Test fit your turkey decoy either by inserting the Threaded Tip end into the available plug hole on your decoy, or by twisting it into the 1/4"-20 threaded hole in your decoy.

WARNING: To prevent damage to your decoy, always remove the decoy, and transport the stake and decoy unassembled.

3. Scout the ground you'd like to place your decoy. While Ground Auger will hold in any terrain, some are obviously better than others, as muddy or wet conditions may require deeper depths in which to screw your Ground Auger (Figure A).

Figure A: Muddy or wet conditions may require deeper depths than a solid, hard or rocky condition. Insert your Ground Auger until solidly in place.

4. Once in the field, insert the Solid Steel Auger into the ground, and using the Integrated Handle, twist clockwise until solidly in place (Figure B). Mount your decoy on the Threaded Tip until solidly in place.

5. To remove after use, remove your decoy by reversing the installation process, grasp the Integrated Handle and twist counter-clockwise. Wipe off any moisture or debris and store in a dry place for best product lifespan.
