

# GROUND AUGER TRAIL CAMERA POLE GATV301 Assembly and Use Instructions

Thank you for purchasing the Trail Camera Pole from Ground Auger Hunting Solutions. These instructions will guide you to the proper assembly and use of the Trail Camera Pole with your camera (not included).

**To prevent damage to your camera, it is recommended to transport your camera and Ground Auger stake separately.**

1. Scout the ground you'd like to place your trail camera. While Ground Auger will hold in any terrain, some are obviously better than others, as muddy or wet conditions may require deeper depths in which to screw your Ground Auger (Figure A).

**Figure A:** *Muddy or wet conditions may require deeper depths than a solid, hard or rocky condition. Insert your Ground Auger until solidly in place.*

2. Insert the Solid Steel Auger into the ground, and using the Integrated Handle, twist clockwise until solidly in place.

3. The Mounting Bracket allows for multiple positions for mounting your trail camera. For cameras with bottom mounts, place your camera on top of the mounting bracket, and attach using the included Thumb Screw until tight (Figure B). For cameras with back mounts, place the camera in front of the mounting bracket, and use the Thumb Screw to attach (Figure C). A camera can also be attached by strapping it directly to the pole (resting on top of the mounting bracket).

**Figure B:** *Bottom mount camera*

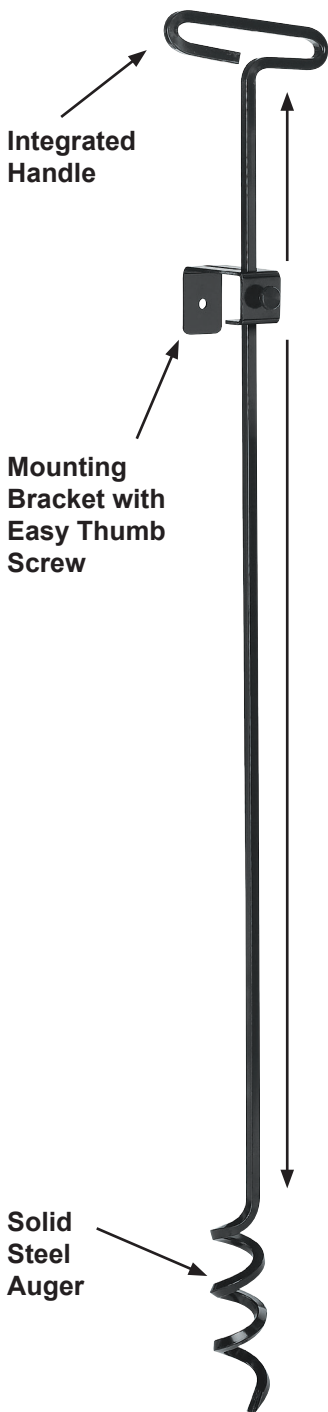

**Figure C:** *Back mount camera*

4. To adjust the height of your camera, loosen the Thumb Screw attaching it to the pole, and slide either up or down along the pole (Figure D). Re-tighten the Thumb Screw to set the placement. Be sure to check all Thumb Screws for tightness before leaving the set up.

**Figure D:** *Adjusting Height on Bracket*

5. To remove after use, remove your trail camera, grasp the Integrated Handle and twist counter-clockwise. Wipe off any moisture or debris and store in a dry place for best product lifespan.
